
A. What the clock hides (age $t = 1.0$)
projection $\bar{h}(t, u)$
true $H(u, A)$, survivors, 10–90%
$H = \nu$
Completion intensity
Assessment u
B. Durations: identical
economy B (clock)
projection P
Density
Duration τ
C. Revisions: identical
cross-sections of U also identical
Density
Revision Δ
D. Area at completion: different
economy B: $S_B = 0.4166$
projection P: $S_P = 0.4208$
$\mathbb{E}[I_\tau^2 \mid \tau]$
Duration τ
